Health, disease and environmental research: biology, tools and applications

IBPM Annual Meeting

Rome, May 8th 2018
Aula Convegni CNR

Scientific committee
Nicoletta Corbi, Andrea Ilari, Pietro Laneve, Roberto Piergentili, Patrizia Somma

Organizing committee
Giulia Guarguaglini, Isabella Monosi, Barbara Ognibene, Roberto Piergentili

Segreteria IBPM
Phone: +39 06 4993 3874-3873
e-mail: segreteria.ibpm@cnr.it

On-line Abstracts Book:
Roberto Piergentili
e-mail: roberto.piergentili@cnr.it

Web Support:
Mario Incarnato
e-mail: mario.incarnato@cnr.it
Neurological disorders, affecting peripheral and central nervous systems, include a large range of diseases such as epilepsy, Alzheimer's disease and other dementias, cerebrovascular diseases including stroke, migraine and other headache disorders, multiple sclerosis, muscular dystrophy, Parkinson's disease, autism spectrum disease, Amyotrophic Lateral Sclerosis, neuroinfections, brain tumors, trauma- and malnutrition-related disorders.

The research interests of a significant number of IBPM researchers converge on a common theme: the study of the molecular mechanisms underlying normal and pathological neural physiology to identify novel drivers of neurological disorders.

To formalize the interactions among scientists exploring the molecular mechanisms underlying the neuronal physiology and pathology, we decided to establish the NeuroNet consortium, which provides the integration and sharing of multi-faceted competences, combined with the use of different in vitro and in vivo model systems and molecular approaches. Our final goal is the identification of specific macromolecules (DNA, RNA and proteins) that may represent novel diagnostic/prognostic biomarkers and potential targets for different neuro-pathologies.

In addition, the development of this research area will create the conditions to further deepen the knowledge on two biological conditions - stress and inflammation - that, being at the basis of a large number of diseases, are currently receiving increasing attention.
